Take part in the next generation of farming
Where human, soil, plants and animals work in harmony

BINGN: BIODYNAMIC INITIATIVE FOR THE NEXT GENERATION - NORDIC 2 YEAR APPRENTICESHIP PROGRAM

BINGN is an initiative with the goal to inspire, connect and support the new generation of farmers. Bio-dynamic agriculture takes organic farming to a deeper level, where you, the farm, the soil, spirit and nature are integral and cooperate as an organic unity.

As a student in our Apprenticeship Program, you will learn the most important aspects of running a farm and how to work on a farm as independently as possible and according to biodynamic principles. Thereby the program is based on Anthroposophy.

You will learn by working on biodynamic farms and through seminars in the Nordic countries several times a year. On the farm, you will acquire practical skills and a deeper understanding of the farm as a living organism. The seminars will provide knowledge in several topics necessary for a profound understanding of biodynamic agriculture and its role in society now and for the future.

Apprenticeship starts in autumn
